

We have prepared this folder for your review because we are proud of our history, and the record our products have achieved in many different industries. We encourage your inquiries and hope you enjoy this brief look at our company and products.

We'd like to stress the fact that all PALLET MULE components are made in the USA. We maintain an inventory of standard trucks and parts at all times to assure speedy delivery to our accounts worldwide. Standard pallet trucks are shipped immediately after orders are received in our Scottdale, Georgia plant (a suburb of Atlanta). Repair parts are shipped within 24 hours.

10,000 lb. capacity, 120" truck with automotive type brake designed for Formica Corporation.

5,000 lb. capacity, 36" lift truck designed for 3M Company.

PALLET MULE THE WORLD LEADER IN SPECIAL DESIGN MATERIAL HANDLING TRUCKS

the Christian Brothers

Wesley Manufacturing Co.
3680 Chestnut St.
Scottsdale, Georgia 30079

Attn: Mr. Kirn

Dear Mr. Kirn:

Just a note to thank you for your fine service in the manufacture of our custom Pallet Mule that we purchased in December of last year.

It has been an invaluable tool for us and has made a very difficult job much easier. We honestly don't know what we would have done without it!

As I mentioned to you on the telephone, we are using the Pallet Mule to move our 5100 gallon wine aging tanks. It is a very delicate job because of their large size and the lack of room in which to work.

The Pallet Mule has performed flawlessly, and we would recommend it highly to anyone.

Thank you again, Mr. Kirn, and if you are ever in our area, please be sure to stop by and see us.

Sincerely,

Brother James, FSC
Bj/ww

Letter from Brother James, The Christian Brothers Winery, Napa California.

Featured on this page are representative models of the hundreds of specially designed PALLET MULES in use in the USA and abroad.

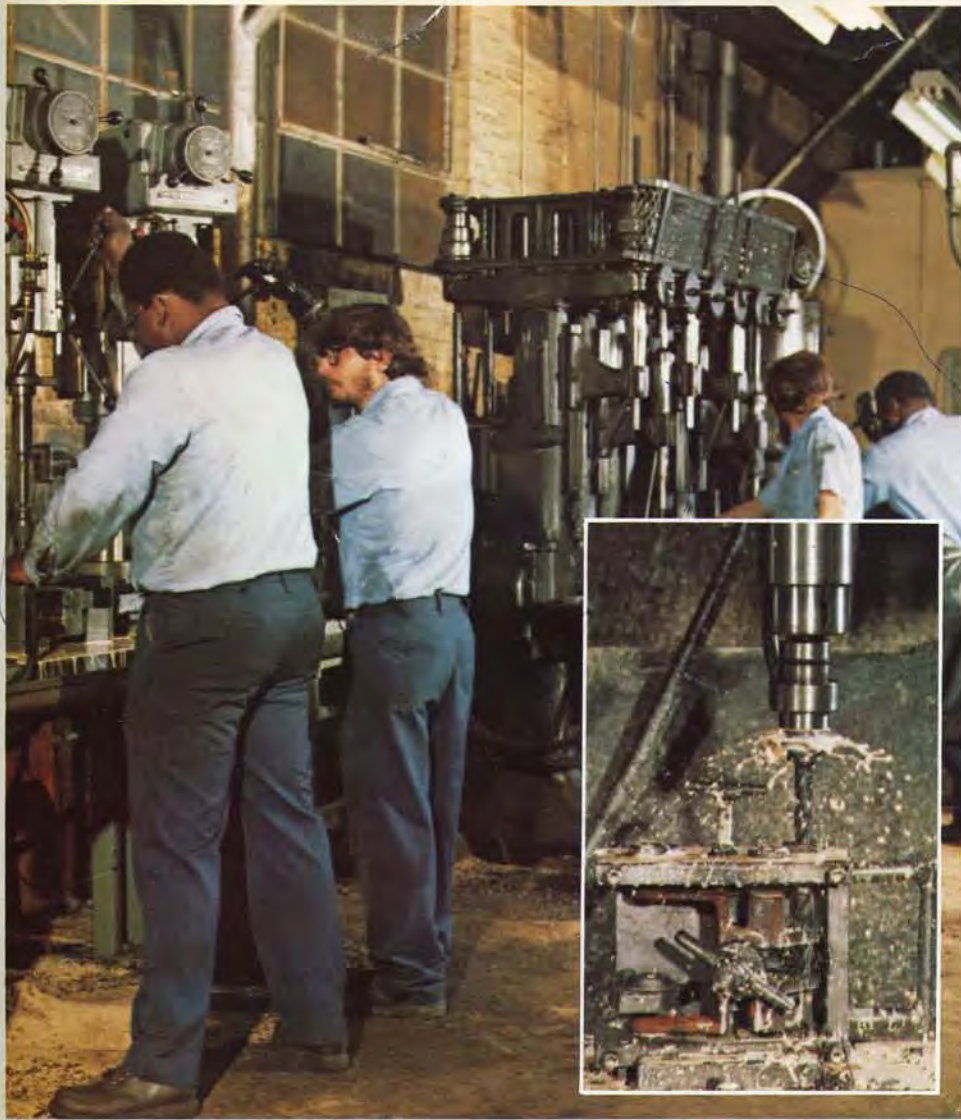

98" truck with special superstructure mounted on forks, designed for PPG Industries.

10,000 lb. capacity trucks designed for U.S. Aluminum & Steel Highway Products Co., one of which is a three fork truck.

Ductile iron castings are precision drilled in our special jigs. Free graphite in the castings provides lifetime lubrication. Our exacting drilling process assures proper fitting of parts and makes repairs simple and easy.

The hydraulic pump is the heart of a pallet truck. To be certain of quality control, we manufacture our own pumps. All PALLET MULE pumps are specially designed for dependability, simplicity and long-time durability.

Drilled castings are welded to 7 gauge formed steel, using a special nickel alloy welding wire to produce unitized, heavy-duty frames. Jigs and fixtures are used in frame construc-

EVERY PALLET MULE IS TESTED UNDER ACTUAL LOAD CONDITIONS...

A comprehensive inspection is performed, and recorded, on each PALLET MULE produced. During this detailed testing phase of our manufacturing process, final adjustments are made to lowering mechanism, pump restrictor and other critical points to help provide flawless service from the moment you receive your PALLET MULE.

As the world leader in the manufacture of special-use pallet trucks, we produce an endless array of problem-solving custom units. Here, President Jim Meeker (L), Vice-Presidents Bill Kirn (R) and Steve Grizzard (C) discuss a specially designed 60" ID straddle truck.

Our Electric Division manufactures unusually rugged Electric Stock Chasers and a line of Walkie Pallet Mules. Our powered units utilize the time-proven manual pump and are ideal for economically upgrading from manually moved pallet trucks.

**WE ALSO MANUFACTURE.....
SPECIAL PALLET TRUCKS AND ELECTRIC UNITS.**
